/note="Vector: pAMP1; Construction of the cDNA library was performed by Dr. W. Gregg Clark using a modification of the cDNA synthesis protocol developed in the laboratory of Dr. Michael Lovett by Dr. Yulla Korshunova (personal communication). First polya + RNA was isolated from total gametophore RNA using oligo dT magnetic beads. Following this, first strand cDNA synthesis was performed on the bead-bound polyA + RNA, during which an oligonucleotide anchor sequence was incorporated onto the 5'-ends of the cDNA. PCR amplification was then used to synthesize the second strand, to amplify the double stranded DNA, and to incorporate durp containing sequences into the ends of the double stranded cDNA. This DNA was size selected and clonned into pAMP1 using the Cloneamp PAMP1 System (Life Technologies, GibcoBNA) for cloning was directional based on sequence asymmetry introduced at the ends during PCR amplification. Was multiple cloning site in pAMP1. This annealing mixture was transformed into chemically competent DH100 clis and selected for chemically competent DH100 clis and selected for chemically competent phylograph consequence asymmetry introduced at the maintaily resistant crowner of them consecuence of the multiple cloning site in pAMP1. This annealing mixture was transformed into chemically competent DH100 clis and selected for amplied the Not site of the multiple cloning selected for amplied to the Not site of the multiple cloning selected for amplied to the Not site of the multiple cloning site in pAMP1. This annealing mixture was transformed into competent DH100 clis and selected for amplied to the Not site of the multiple cloning site in the Not site of the multiple cloning selected and considered by the consecuence consecuence consecuence consecuence consecuence consecuence consecuence consecuence

// lab_host="D: PMP1; Construction of the CDNA library was
performed by Dr. W. Gregg Clark using a modification of
the CDNA synthesis protocol developed in the laboratory of
Dr. Michael Lovett by Dr. Yulia Korshunova (personal
communication). First polyA + RNA was isolated from total
gametophore RNA using oligo dT magnetic beads. Following
this, first strand cDNA synthesis was performed on the
bead-bound polyA + RNA, during which an oligonucleotide
anchor sequence was incorporated onto the 5'-ends of the
cDNA. PCR amplification was then used to synthesize the
second strand, to amplify the double stranded DNA, and to
incorporate dUTP containing sequence symmetry introduced at
cloned into pAMP1 using the CloneAMP pAMP1 System (Life
Technologies, GibcosNE), for cloning amplification products
by a non-restriction site dependant process. The cloning
was directional based on sequence asymmetry introduced at
the ends during PCR amplification. The 3' cDNA ends are
proximal to the NotI site of the multiple cloning site in
pAMP1. This annealing mixture was transformed into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chemically competent DH10B cells and selected for ampicillin resistant growth. The resulting clones (about 330,000) were pooled to make the library."

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* Will be sequenced to completion. In the event that
the record is updated, the accession number will

Direct Submission
Submitted (13.707-1999) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Jul 13, 2000 this sequence version replaced g1:6468112. All repeats were identified using RepeatMasker:
Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                   Center: Whitehead Institute/ MIT Center for Genome Research Center code: WIBR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                 18 10077; gap of 100 bp

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 11, 2002 this sequence version replaced gi-15594038.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >-

30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; SW:, SWISSPROT; Tr:, TREMBL; WP: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HSJ666F24 139563 bp DNA linear PRI 09-FEB-2002 Human DNA sequence from clone RP4-666F24 on chromosome lpl3.1-13.3, ALI09660 ALI09660.14 GI:18650725
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the places at snot known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

ACCESSION VERSION KEYWORDS SOURCE is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

151372: contig of 151372 bp in length 151373 151472: gap of unknown length 151473 212739: contig of 61267 bp in length.

                                                                                                                                                                          Submitted (II-0CT-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 158, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requestis: clonerquest@sanger.ac.uk
On Oct 12, 2001 this sequence version replaced gi:14787516.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SwISSPROT; TT:, TREMBL; WORMPEP; Information on the WORMPEP than of the feature fable with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             171943 bp DNA linear PRI 30-JUN-2000

ppi1-30G13 is from the library RPCI-11.1 constructed by the group
of Pieter de Jong. For further details see
http://www.chori.org/bacpac/home.htm
NECTOR: psAce3.6
IMPORTANT: This sequence is not the entire insert of clone
RP11-30G13 it may be shorter because we sequence overlapping
sections only once, except for a short overlap.
The true left end of clone RP11-103A2 is at 110619 in this
sequence. The true right end of clone RP11-34M14 is at 2000 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pleces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                    This oligonucleotide represents one of a claimed primer pair (see also AAX87657) that can be used in the amplification of microtubule motor protein nucleic acids, especially Til-gamma DNA or RNA from a hyphal fungus such as Thermomyces lanuginosus (see AAX87656).

Tr-gamma (see AAX06618) is a novel ATP-dependent, plus end-directed microtubule motor protein that is a member of the unc-104 family and kinesin superfamily. The invention provides TL-gamma nucleic acids, proteins and antibodies, and methods of screening for TL-gamma nodulators potentially useful for treating hyphal fungal infections and diseases caused by mutated TL-gamma, e.g. neurodegeneration. TL-gamma nucleic acids are also used to identify polymorphic variants, alleles, homologues etc. of TL-gamma, or cher motor proteins, to generate protein structural models, for recombinant production of TL-gamma, as antisense molecules, to produce transgenic or knockout animals, and in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TL-gamma; kinesin; motor protein; microtubule; unc-104; infection; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; Huntington's disease; amyotrophic lateral sclerosis; ss.

coding for TL-gamma (see AAY06618), a novel ATP-dependent, plus end-directed microtubule motor protein that is a member of the unc-104 family and kinesin superfamily. The gene was isolated from genomic DNA by PCR amplification (see also AAX8765-61).

The invention provides TL-gamma nucleic acids, proteins and antibodies, and methods of screening for TL-gamma modulators potentially useful for treating hyphal fungal infections and classases caused by mutated TL-gamma, e.g. neurodegeneration involving anterograde axonal transport, such as Alzheimer's, Parkinson's or Huntington's diseases or amyotrophic lateral sclerosis. TL-gamma nucleic acids are also used to identify polymorphic variants, alleles, homologues etc. of TL-gamma, or cher motor proteins, to generate protein structural models, for recombinant production of TL-gamma, as antisense molecules, to produce transgenic or knockout animals, and in gene therapy. Detection of TL-gamma allows differentiation between hyphal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

ö

The present invention describes a library of human polynucleotides comprising the sequences given in AAZ1253 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ1532 to AAZ1779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer, The polynucleotides can also be used to screen for and lung cancer. The polynucleotides can also be used to screen for peptide analogues and antagonists.

```
The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These rest useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium coryneform bacterium. Handle and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacterium acutain acutal in the exemplification of the present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               European Patent Office.

Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

Disclosure; SEQ ID NO: 7065; 246pp + Sequence Listing; English.

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonds aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery
from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Carr GJ;

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, or asospastic ischaemia) by measuring expression levels of particular genes (ABI99102 to ABI9912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving represent PCR primers for a mouse ischaemic condition related sequence. The represent PCR primers for a mouse ischaemic condition related sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Stathogical conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, and season of the itssues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, descases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders (e.g., Alzheimer's disease, Parkinson's disease), postiasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, andiogenic disorders, endocrine disorders, and infections. The proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding preserved to modify storage properties. Annibudies specific for a preserved to modify storage properties. Annibudies specific for a preserved to modify storage properties. Annibudies specific for a preserved to the disorders and in chemotaxis, and can be used as a food additive or preserved to the modify storage properties. Annibudies specific for a preserved to the disorders and an be used as a food additive or preserved to the disorders and an beautify their cognate ligands.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a human secreted protein-encoding cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; cytokine; cell proliferation; cell differentiation; growth factor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA).

                                                                                                                                                                                                                                          Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The sequences ABA08225-ABA09574 represent nucleic acids encoding them. The Invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of detecting the nucleotides. CC or polypeptides in a sample, and methods of detecting the nucleotides or polypeptides of the invention have homology to known proteins, thereby compounds which into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities; stem cell growth activity; and hence contentiation activities; stem cell growth activity; haematopolesis requilatory activity; itssue growth activity; hematopolesis requilatory activity; itssue growth activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or thrombolytic activity; activity; activity, activities, haemostatic, thrombotic or thrombotic activity, activities, haemostatic, thrombotic activity, activity, activities, haemostatic, activity, activity, activity, activities, and and activities, and anormal conditions, e.g., by protein or gene therapy. Such conditions and anormal product activity, activity, and activity, activity, and anormal activity, activity, activity, and activity, activity, and activity, activity, and activity, and anormal activity, activity, activity, and activity, activity, and activity, activity, and activity, activity, and activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a cDNA encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The Invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system, such as an encopathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, arthritis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and CNNS disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                         11-0CT-2001
                                                         AAS85661;
                                                           The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activity chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequence data for this patent did not form part of the printed

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in esponsible for genetic disorders or other traits to assess biodiversity and and produce other types of data and products dependent on DNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
cc expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
cs supplement the patients own production of (I). Additionally, (I)
cc supplement des may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent.

cc cancers and cancer metastases of haematopoietic-derived cells. AAK64703
cc cancers and cancer metastases of haematopoietic antigen genomic
co AAK87694 represent invention. AAK54942 to AAK84950 and AAM82169
cc represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                       Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
c supplement the patients own production of (I). Additionally, (I)
c polynucleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK87950 and AAM82169
represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GHPO protein; Helicobacter infection; gastroduodenal disease; gastritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastrointestinal diseases

This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these ulcer diseases, e.g. gastric and atrophic gastritis, and peptic ulcer diseases. e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used detection and diagnosis.
                     Claim 1; Page 756; 2054pp; English.

Sequence 27, Application US/09058260B
Patent No. 6218167
GENERAL INCRMATION:
APPLICANT: Allen, Larry
APPLICANT: Alkens, John
APPLICANT: Ponstein, Wichael
APPLICANT: Demirjian, David
APPLICANT: Casadaban, Malcolm
TTILE OF INVENTION: Stable Biocatalysts for Ester Hydrolysis
FILE REPERENCE: 95-963-H
CURRENT PILING DATE: 1999-04-10
EARLIER APPLICATION NUMBER: 60/001,995
EARLIER APPLICATION NUMBER: 60/009,704
EARLIER APPLICATION NUMBER: 60/009,704

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 15, Application US/08474140

Patent No. 5721127

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: PROLUGANASE, MICROORGANISMS WHICH

TITLE OF INVENTION: PRODUCE IT, PROCESSES FOR THE PREPARATION OF THIS

TITLE OF INVENTION: PLUIDANASE AND THE USES THEREOF

NUMBER OF SEQUENCES: 15

CORRESPONDENCE ADDRESS:

ADDRESSEE: WILLIAN BRINKS HOFER GILSON & LIONE, P.C.
